Dear Andrea,

Enclosed please find a draft Phase I Summary Report for the Albion-Sheridan Township Landfill site in Albion, Michigan. This represents the results of all the field work completed to date, including sediment, surface water, and limited soil sampling, as well as two rounds of groundwater sampling. We are now at a critical decision point for the project, and I would like the input of the municipal landfill pilot workgroup as we determine how to proceed.

As you and I discussed today, I am planning a meeting with the Michigan Department of Natural Resources and the contractor, WW Engineering & Science, on June 30 in Grand Rapids, MI. During this meeting we will talk about the results of the Phase I investigation and plan the next steps for the project. I hope that some members of the pilot workgroup will be able to attend this meeting. We can talk on Monday to determine whether this date is convenient and whether travel money is available.

As always, please call me at (312)353-7556 if you have any questions. Thank you.

Sincerely,

Mary Beth Novy
Remedial Project Manager
